## ABOUT

Clay bricks are made from fired clay and are an ancient building material, very popular since roman times. Brick-making improvements have continued into the twentieth century. Improvements include rendering brick shape absolutely uniform, lessening weight, and speeding up the firing process. For example, modern bricks are seldom solid. Some are pressed into shape, which leaves a frog, or depression, on their top surface. Others are extruded with holes that will later expedite the firing process by exposing a larger amount of surface area to heat. Both techniques lessen weight without reducing strength. Anyhow bricks are a quality building material that retains heat, with-stands corrosion, and resists fire.

NILO RUSTIC

#### **Ruckers Hill House by Studio Bright**

**There is no better example of a masterpiece of architectural design than The Ruckers Hill house by Studio Bright. The modern extension of the Edwardian heritage house was built with the use of our Nilo Rustic Bricks, which is apart of our Modern Brick Range. These clay bricks are a quality building material that retains heat, withstands corrosion, and resists fire. Studio Bright delivered a beautifully detailed and appropriate redesign to the Edwardian style, with a playful sense of curiosity. We were thrilled to have contributed to such an exceptional work of architecture!**

LOHAS Australia's Modern Bricks are a very exciting range of Architectural Bricks. Known for the high-performance perforated bricks, a variety of finishes, multiple colours, and formats.

Bricks are an ancient building material and have been very popular since the Roman times. Brick-making improvements have continued into the twentieth century meaning the quality of the bricks are improved. Our bricks are made from fired natural clay. Our range have two differentiated manufacturing processes: exclusively thermal and thermo-waterproofing process.

Sustainability is a core value at LOHAS Australia, with the use of biogas as fuel, thus avoiding the emission of CO2 into the atmosphere. Extruded bricks with holes that will later expedite the firing process by exposing a larger amount of surface area to heat. Both techniques lessen weight without reducing strength. This reduces energy costs and transportation weights.
